Objective and historical reference

Target

The survey aims to:

1. Provide data on the amount of used water and wastewater and methods of disposal and methods of treatment
2. Providing statistical data on solid and liquid waste (hazardous and non-hazardous) and the method of disposal
3. Provide data on the consumed energy sources, their quantity and value
- 4 . Provide data on spending on environmental protection and the number of employees

Survey methodology translated into English

Comprehensiveness of the survey: the survey included all the various industrial activities according to the ISIC4 classification

Survey Framework: Economic Establishments Census 2018

Survey sample: A stratified sample of economic establishments was drawn according to the international classification of industrial activities, distributed according to the geographical division in the Kingdom into three regions, and then the society in each region and economic activity was divided into five categories: Class (1) workers in the establishment 5 or less, class (2) Workers in the facility from 5-9 workers, category (3) workers from 10-19 workers, category (4) workers with 20 workers or more, category (5) rare establishment.

Sample size: (2277) establishments.

Historical reference: The year in which the survey began should be mentioned

The survey has been carried out since 1995

Users and Applications:

Users: economic and social experts, researchers in the environmental, economic and social fields and academics, in the public and private sectors, international and regional bodies and individuals

Applications: environmental, economic and social planning and policy-making processes

Source

Data is collected through an annual field survey.

The body authorized to collect and publish data

Department of General Statistics under Law No. 12 of 2012

1.Contents

Survey questionnaire

2.Time

2.1 Reference period (the reference time period in which the data is collected)

1/3-30/11/2020

2.2 Publication date (the annual date of publishing data by the department)

1/4-30/5/2022

2.3 Commitment to publish

30/5/2022

2.4 Repetition

Annually"

(Indicate the time series available from this survey data)

Time series available 1995-2020

3 Accuracy level

3.1 Total accuracy

Very high

3.2 Sources of inaccuracy

Non-preview errors

3.3 Available Accuracy metrics

Descriptive accuracy metrics

4 Comparisons

4.1 Comparison over time

This data is comparable with previously produced data due to the use of the same methodology and the application of international standards

4.2 Comparison with other statistics

This data is comparable with other statistics that use the same international definitions and classifications

5 Data access

5.1 Publication form

The data shall be published in paper and electronically on the website of the Public Department
